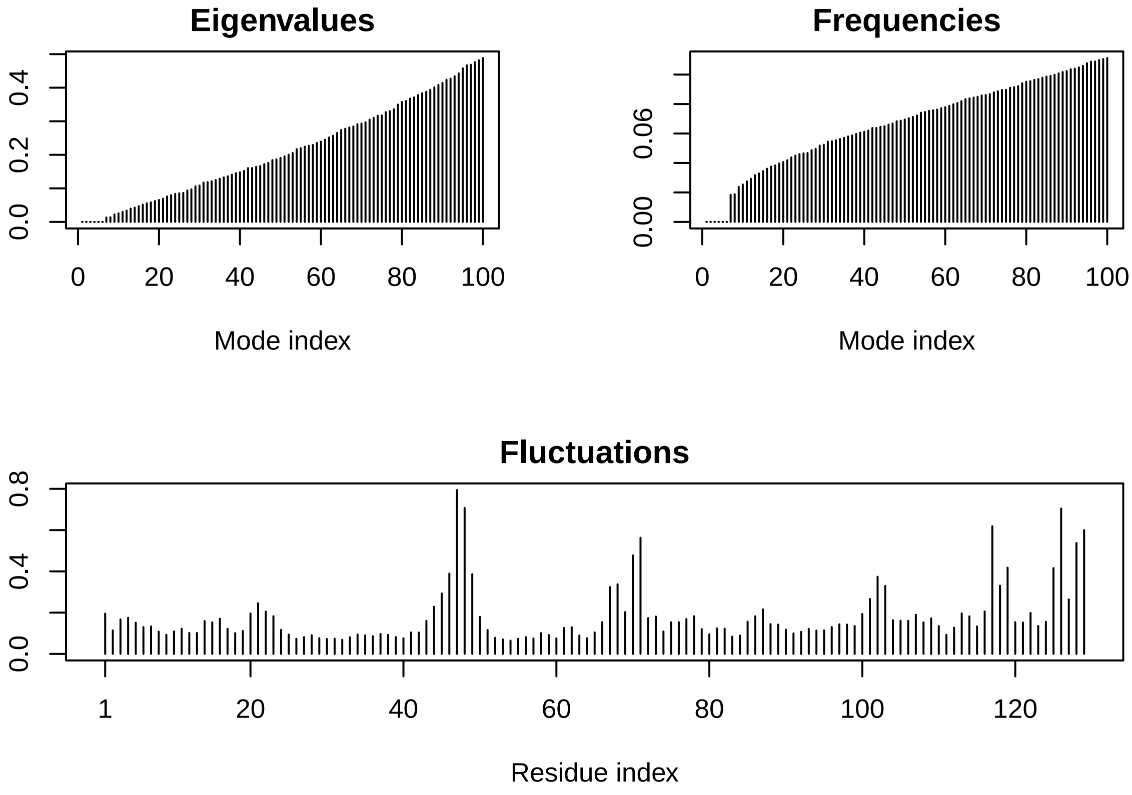
Let's use bioinformatics methods called NMA (Normal Mode Analysis) to predict the dynamics (flexibility) of the enzyme

```
modes <- nma(pdb)
```

```
##  Building Hessian...     Done in 0.037 seconds.
##  Diagonalizing Hessian...    Done in 2.209 seconds.
```

```
plot(modes)
```



Make a "move" of its predicted motion. We often call this a "trajectory"

```
mktrj(modes, file="nma.pdb")
```

# Analysis of ADK

> Q10. Which of the packages above is found only on BioConductor and not CRAN?

“msa”

> Q11. Which of the above packages is not found on BioConductor or CRAN?

The packages that are downloaded from GitHub or Bitbucket are not on Bioconductor or CRAN. In this case it is “Grantlab/bio3d-view” from bitbucket

> Q12. True or False? Functions from the devtools package can be used to install packages from GitHub and BitBucket?

TRUE

Search and Retreive ADK structures

```
aa <- get.seq("1ake_A")
```

```
## Warning in get.seq("1ake_A"): Removing existing file: seqs.fasta
```

```
## Fetching... Please wait. Done.
```

Q13. How many amino acids are in this sequence, i.e. how long is this sequence?

214

```
